### Explanations on the Operating Results and Financial Conditions

The following are notes to the changes in principal financial indicators of the Company:

1. Despite a downturn in the external market environment, the Company's revenue slightly grew year-over-year in 2023. The decline in operating income growth in the first three quarters narrowed, and by the fourth quarter, the Company achieved year-over-year revenue growth. During the Reporting Period, sales of the Company's PV diodes, silicon carbide products, and IGBT products increased significantly. However, due to intensified industry competition, the gross margins of these products are currently below the Company's average, leading to an overall decline in gross margin.

2. The Company continues to focus on customer and market demands, increasing investment in new product development. In 2023, the Company's product development achieved revenue growth.
